

- Expand accessibility across multiple offices or locations
- Enhance the accuracy and completeness of incident information
- Pinpoint cost drivers and risk exposures before they impact your bottom line
- Optimize data security and regulatory compliance
- Deploy facility-wide with no seat level license limits

Event Reporting and Management

Boost your bottom line,
business productivity and efficiency

Boost efficiency and effectiveness around hospital event investigations with Trideo's robust Event Reporting and Management capabilities. Now you can begin data collection processes immediately when events occur to better support insurance tracking, risk management, and state and federal reporting.

Trideo's intuitive web-based interface makes it extremely easy for nurses or other professionals to enter event data in real time at the hospital or facility floor for greater accuracy and expediency. With Trideo, data fields can be customized for your unique environment - from location and specialty to specific program event codes. Faster data collection means quicker triage and risk management response, averting any unnecessary claims or costs that may arise from response delays or the inability to address a patient's concerns.

Trideo can help any organization centralize event data within one comprehensive electronic file capable of supporting various file types and formats. With the click of a button, Risk Managers can turn reported events into Notice of Claims for rapid reporting to claim organizations or third-party administrators. All confidential patient data is stored, backed-up and archived securely off-site.

Once you experience the simplicity of Trideo, you'll wonder how you ever managed incidents before.
