

- Increase defense effectiveness
- Eliminate the cost of paper storage, printing, copying and postage
- Maintain auditable records of email correspondence and case notes
- Provide instant access to up-to-date medical records, pleadings and insurance policy data

Litigation Management

Boost your bottom line,
business productivity and efficiency

Trideo makes the entire end-to-end litigation process as simple and streamlined as possible. Our state-of-the art collaboration and record centralization tools have been designed to significantly boost employee productivity and minimize the cost of litigation within your organization.

Using our Litigation Management module, claims managers, defense counsel and other interested parties can easily communicate and share critical case data in a timely and efficient manner. All correspondence and patient files are made securely and conveniently accessible from any web-enabled computer. Upload, organize and archive electronic medical records, pleadings, case analyses, vendor and litigation invoices. Trideo supports all customary file types, with automated back-ups conducted routinely and confidential records encrypted and stored offsite for immediate or long-term retrieval.

To ensure cases are resolved both on-time and on-budget, we've integrated electronic billing and payment approval capabilities along with phase and task budget tracking based on standard ABA billing codes. Trideo can also auto-filter electronic legal bills to ensure budget and program-specific legal guidelines compliance. Trideo's Schedule Order calendar tracks case status in real-time, while trending analysis supports fast-track and alternative dispute resolution programs based on litigation analysis, invoice and billing information.

Take your litigation experience to a completely new level.
