- Responsive around-the-clock technical support
- Unified data access and reporting capabilities
- Extremely cost-efficient pricing model
- Processes based on up-to-date industry best practice guidelines

Medicare Section 111 Reporting

Boost your bottom line,
business productivity and efficiency

Developed by experts in claims management and MMSEA Section 111 regulatory reporting, Trideo's Medicare Reporting module can help you simplify one of the most complex reporting requirements introduced by the Centers for Medicare and Medicaid Services. With our easy-to-use interface, compliance has never been so efficient and straight-forward.

Discover truly advanced claims software features and functionality including automated rules that allow you to skip unnecessary fields. Save time and boost compliance with intuitive audit reports that pinpoint any missing fields required for proper reporting. Our highly sophisticated technology can help your organization minimize – if not eliminate – file rejection caused solely by missing information.

Because each client's needs are unique, we've designed our popular Medicare Reporting module for use separately or as an integrated aspect of the comprehensive Trideo Risk Management Information System. When used in collaboration with the complete system, data for claims that are eligible for reporting are automatically populated to and from other areas. All Trideo modules deliver industry leading security features and require no heavy up-front investment in hardware or software.

Isn't it time you put enterprise-level technology behind your reporting processes?
